

SIEGMUND - ZUBEHOER Tischpresse System 28 (1125-2800464)

© Heinz Sanders GmbH

Sanders item no. S948928004643

Control type
konventionell

Construction year
NEU

Machine no.
1125-2800464

Make
SIEGMUND - ZUBEHOER

Perfect welded constructions thanks to pre-tensioning before welding.

The bench press is used to straighten deformed steel products. With a pressing force of 2.5 tons, parts with unwanted unevenness or tension in the material can be straightened. With the additionally available pipe bending punch, pipes with a diameter of up to 42 mm can be bent flexibly.

The total stroke is 60 mm, which can be achieved with 13 pump strokes with an operating force of approx. 330 N (stroke per pump stroke 4.6 mm). An overflow valve prevents further pressure build-up when the piston rod is fully extended.

For secure attachment to the table, the table press can be fixed through the turret head either with quick-release bolts or with the attached bolt.

The table press must always be fixed in two places.

- for clamping and straightening
